

1. What Exactly is Vaultify?

Vaultify is a fictional cloud backup, file synchronization, secure file sharing, and team collaboration **Software-as-a-Service (SaaS)** platform.

Conceptually, Vaultify belongs to the same broad product category as cloud file platforms such as Google Drive, Dropbox, and Microsoft OneDrive, but its product design places additional emphasis on **automatic device backup**, **recovery history**, **enterprise administration**, **security controls**, **auditability**, **data residency**, and **compliance-oriented features**.

Vaultify allows customers to:

- **Protect files** stored on computers.
- Keep selected folders **synchronized between devices**.
- Access files through **desktop, web, and mobile** interfaces.
- **Share content** securely with internal and external users.
- Centrally manage organizational data through an **Admin Console**.

Practical Workflow Example

A typical customer might install Vaultify on a work laptop, select **Documents**, **Projects**, and **Finance** as Backup Sources, and allow Vaultify to continuously protect those folders. The same customer may also enable **Sync** for a **Team folder** so that authorized coworkers see changes on their own devices.

Vaultify is delivered as a **cloud SaaS product**. Customers do not manage the cloud storage infrastructure themselves. They create a Vaultify account/workspace, install supported client applications, select a subscription plan, and use the service over the internet.

Primary Product Goals

- **Protect important files** from accidental loss.
- Keep working files **synchronized across devices**.
- Allow **controlled file and folder sharing**.
- Support **team collaboration** through shared folders.
- Provide administrators with **centralized security and governance controls**.
- Provide enterprise customers with **audit, retention, compliance, API, SSO, encryption-key**, and **data-residency capabilities**.

2. Who is Vaultify For?

Vaultify is designed for several customer profiles:

Individual Users

Individuals can use the **Free plan** for basic cloud backup and synchronization. This is suitable for personal documents, study material, photos, and small projects.

Professionals and Small Teams

Pro provides substantially more storage, continuous backup, longer recovery history, storage add-ons, and priority support. It is suitable for freelancers, small businesses, project teams, and professionals who work across devices.

Enterprise Organizations

Enterprise is intended for organizations that require centralized identity, security, compliance, governance, support SLAs, data residency, API access, auditability, and custom storage.

Example enterprise departments using Vaultify:

- **Engineering:** Project files and technical documents.
- **Finance:** Reports and controlled team folders.
- **HR:** Internal employee documents with restricted permissions.
- **Marketing:** Shared campaign assets.
- **Legal/Compliance:** Controlled documents, audit evidence, and retention holds.

3. Core Product Components

Vaultify consists of eight major architectural components:

1. **Vaultify Cloud:** Stores protected and synchronized customer data.
2. **Desktop Application:** Available for supported Windows, macOS, and Linux systems. Performs local backup, Sync, status reporting, and diagnostics.
3. **Web Application:** Provides browser-based access to stored files, shared content, account settings, and supported administrative functions.
4. **Mobile Application:** Available for iOS and Android. Supports file browsing, uploads, Camera Upload, sharing, and offline access.
5. **Admin Console:** Provides workspace administration, user/role management, policies, storage visibility, retention configuration, audit logs, and data export.
6. **Developer/API Platform:** Enterprise customers can use REST APIs and scoped API keys to automate supported file, backup, sharing, and audit-log operations.
7. **Integration Layer:** Connects Vaultify with Slack, Microsoft Teams, Google Workspace, and Zapier.
8. **Support & Diagnostics:** Provides application diagnostics, error codes, support knowledge, and Enterprise escalation channels.

4. Product Feature Summary

Major Vaultify features include:

- **Backup & Recovery:** Automatic cloud backup, continuous backup (Pro/Enterprise), daily backup (Free), Backup History, and deleted-file recovery.
- **Synchronization:** Cross-device two-way file synchronization, Large File Sync beta (up to 50GB in v4.2).
- **Sharing & Collaboration:** File/folder sharing through links, password-protected and expiring links, Viewer/Commenter/Editor/Folder Manager permissions, Team folders, and activity tracking.
- **Multi-Platform Access:** Desktop, web, iOS, and Android access, Camera Upload, offline mobile files.
- **Notifications & Integrations:** Configurable notification channels, Slack and Microsoft Teams alert routing, Google Workspace and Zapier integrations.

- **Security & Governance:** TLS 1.2+ encryption in transit, AES-256 encryption at rest, Two-Factor Authentication (2FA), Enterprise SAML 2.0 SSO, Enterprise Customer-Managed Encryption Keys (CMEK), user/role administration, audit logs/exports, custom Enterprise retention, Litigation Hold, and workspace/user data export.
- **Enterprise Infrastructure:** Enterprise REST API, US/EU/APAC data residency, SOC 2 Type II and ISO 27001 documentation (synthetic), GDPR DSAR workflow, dedicated Enterprise support and SLAs.
- **Resource Controls:** Bandwidth throttling, backup/sync priority controls.

5. Product Specifications at a Glance

Parameter	Specification Details
Product Type	Cloud backup, Sync, file sharing, collaboration, and enterprise SaaS
Current Documented Version	Vaultify v4.2
Desktop Operating Systems	Windows 10/11, macOS 12+, Ubuntu 20.04+, Fedora 36+
Linux Packages	.deb and .rpm packages provided
Mobile Operating Systems	iOS and Android
Minimum Desktop Memory	4GB RAM
Local Cache Requirement	At least 2GB free disk space
Recommended Connectivity	Stable connection with ≥ 1 Mbps upload for real-time Sync
Large Folder Backup	Folders ≥ 500 GB must be backed up through desktop, not mobile
Standard Large-File Threshold	Files over 10GB require Large File Sync beta
Large File Sync Limit (v4.2)	Up to 50GB per file when enabled
Free Storage	5GB
Pro Storage	1TB per subscribed user/workspace allocation
Pro Storage Add-on	500GB blocks at \$4.99/block/month
Enterprise Storage	Custom storage limits
Default Enterprise API Rate Limit	1,000 requests/hour/API key
Encryption (Transit / Rest)	TLS 1.2+ / AES-256
Enterprise Identity & Keys	SAML 2.0 SSO / Customer-Managed Encryption Keys (CMEK)
Data Residency Options	US, EU, APAC

6. Account Creation & Getting Started

A customer begins by creating or joining a Vaultify workspace. The desktop application is then installed on a supported computer, and the user signs in using the email address associated with the workspace.

Initial Setup Steps

1. Sign in to the desktop client.

2. Review workspace information.
3. Open **Settings > Backup Sources**.
4. Select the local folders that should be protected.
5. Confirm backup status.
6. Configure Sync folders if cross-device mirroring is required.
7. Configure notifications.
8. Enable **2FA** when appropriate.

Note: New standalone users are enrolled in the **Free plan** by default. A customer can upgrade through **Settings > Billing**. Enterprise users may have different onboarding workflows because administrators can enforce SSO-only authentication, mandatory 2FA, and integration approvals.

7. Backup — Detailed Behavior

Backup is designed to protect selected local data by maintaining continuous cloud copies.

- **Free Plan:** Backup runs **once daily**.
- **Pro & Enterprise Plans:** Backup runs **continuously** when the device is online and the application can access the selected Backup Source.

Backup Status Indicators

- **Green:** Folder is currently up to date.
- **Yellow:** A backup operation is in progress.
- **Red:** The most recent backup failed.

Operational Notes

- **Automatic Retry:** Failed backups are automatically retried every **30 minutes**.
- **Manual Backup:** Users can right-click an eligible folder and select **"Back up now"** to trigger an immediate backup.
- **Backup Sources:** Managed through **Settings > Backup Sources**. If a local folder is moved, renamed, removed, or becomes inaccessible, backup can fail.
- **Backup Priority:** Backup normally runs at a lower priority than Sync. This can be adjusted under **Settings > Backup > Priority**.

8. Backup History & Recovery

Vaultify maintains **Backup History** so eligible deleted or previous files can be restored within the applicable retention window.

- **Free:** 30-day history.
- **Pro:** 90-day history.
- **Enterprise:** Indefinite standard history unless configured otherwise.

Important: A file deleted outside the applicable recovery window may no longer be recoverable through standard Backup History. Enterprise retention and **Litigation Hold** take precedence over ordinary rules.

Backup History is a protection/recovery feature — it should not be confused with Sync.

9. Sync — Detailed Behavior

Sync is a two-way synchronization service. When a synchronized file changes on one connected device, Vaultify propagates the updated state to other devices using the same authorized account/workspace.

- **Sync Pause:** Users can pause Sync temporarily from the system tray.
 - **Independence: Pausing Sync does not automatically pause scheduled Backup.**
 - **Conflicted Copies:** If two devices modify the same file independently while offline, Vaultify preserves both changes by creating a "(conflicted copy)".
 - **Local Storage:** Sync depends on local cache availability. Low disk space can interrupt normal operation.
-

10. Large File Sync

Vaultify v4.2 includes the **Large File Sync beta**.

- **Requirement:** Files larger than **10GB** require Large File Sync enabled under **Settings > Sync > Beta Features**.
- **Beta Limit:** Supports individual files up to **50GB**.

Troubleshooting Large File Sync

If a 20GB–50GB file fails while smaller files synchronize normally, verify that:

1. Vaultify is updated to v4.2+.
 2. Large File Sync beta is enabled.
 3. The file does not exceed **50GB**.
 4. Network and local storage space are sufficient.
-

11. Bandwidth & Performance Controls

Vaultify can limit network consumption through **Settings > Sync > Bandwidth Limits**.

- **Controls:** Separate upload and download caps can be configured.
 - **Use Cases:** Shared office networks, limited home bandwidth, or large initial synchronization jobs.
 - **Priority Management:** Modifying Backup Priority can accelerate backup completion, but overly aggressive settings may impact network performance.
-

12. File Sharing

Vaultify allows files and folders to be shared through generated links.

Share Permission Levels

- **Viewer:** Read-only access.
- **Commenter:** Can view and add comments.
- **Editor:** Can view, comment, and edit content where supported.

Share Security & Activity

- **Protection:** Links can be **password-protected** and set to **expire** after a specified period.
- **External Sharing:** Can be restricted by Enterprise policy.
- **Activity Tracking:** Views, edits, and downloads are recorded under **Activity**.

13. Team Folders & Collaboration

Team folders provide managed collaborative storage for teams.

- **Viewer:** Read-only.
- **Commenter:** Read and comment.
- **Editor:** Edit and upload.
- **Folder Manager:** Editor capabilities plus permission management and member removal.

Offboarding Behavior: When a user is removed from a workspace, their access to team folders is revoked immediately. However, **files they previously uploaded are not automatically deleted.**

14. Web, Desktop & Mobile Access

Interface	Primary Purpose & Key Capabilities
Desktop	Full backup, Sync, local folder integration, diagnostics, and large folder backups (≥500GB).
Web	Browser-based file access, sharing management, account settings, and admin workflows.
Mobile	Browsing synchronized content, uploads, Camera Upload, sharing, and offline access.

15. Mobile Camera Upload

Camera Upload automatically uploads photos and videos from a mobile device.

- **Configuration:** Enable in mobile settings and grant OS permissions.
- **Data Saving:** Enable **Wi-Fi only** under **Settings > Mobile > Data Usage**.
- **Troubleshooting:** Ensure Android battery optimization does not kill background uploads.

16. Offline Mobile Files

Marking files as "**Available offline**" downloads a local copy for offline access.

- Offline copies consume local device storage and **do not automatically clear**.
- Manage offline files under **Settings > Mobile > Offline Files**.

17. Notifications

Vaultify alerts customers about key system events (backup failures, sync conflicts, shares, quota warnings at 90% and 100%).

Supported channels: **Email**, **Desktop push**, and **Mobile push**. Enterprise customers can route alerts to **Slack** or **Microsoft Teams**.

18. Integrations

- **Slack & Microsoft Teams:** Critical event and alert routing.
- **Google Workspace:** OAuth-based integration.
- **Zapier:** Triggers workflows on file add, edit, or share events.

19. Security Architecture

- **Data in Transit:** TLS 1.2+ encryption.
- **Data at Rest:** AES-256 encryption.
- **Account Security:** 2FA and SAML 2.0 SSO.
- **CMEK:** Customer-Managed Encryption Keys for Enterprise plans.

20. Password, Session & 2FA Behavior

- **Account Lockout:** Triggered by repeated failed 2FA attempts.
- **Session Invalidation:** Password resets automatically invalidate active sessions across all devices.
- **Owner Recovery:** Enterprise owner recovery requires proof-of-business verification via Enterprise Support.

21. Enterprise SSO

Configured under **Settings > Security > SSO** via SAML 2.0. Expired certificates or metadata errors cause authentication loops. If SSO-only is enforced, password login is disabled.

22. Customer-Managed Encryption Keys (CMEK)

Introduced in **v4.1**. Key rotation must be executed carefully to prevent temporary loss of file access.

23. Subscription Plans

Feature	Free	Pro	Enterprise
Pricing	Free	\$9.99 / user / month	Custom Pricing
Storage	5GB	1TB	Custom
Backup	Daily	Continuous	Continuous
History	30 Days	90 Days	Indefinite (Custom)
Support	Email (48-hr)	Priority (8-hr)	Dedicated & Custom SLA
Add-Ons	None	500GB (\$4.99/mo)	Custom Add-ons

24. Plan Upgrades & Downgrades

Upgrades take effect immediately. Downgrades triggering over-quota storage receive a **14-day grace period** before new uploads are paused.

25. Storage Add-Ons

Pro customers can add 500GB blocks for \$4.99/block/month. Cannot be removed if current usage exceeds reduced limit.

26. Admin Console

Central management hub for Pro/Enterprise plans: user management, role assignments (Member, Admin, Owner), storage visibility, policies, audit logs, and data exports.

27. Workspace Ownership

The **Owner** holds supreme authority. Ownership transfers can only be initiated by the current Owner via **Admin Console > Users > Transfer Ownership**.

28. Audit Logging

Records administrative and content events. Exportable in **CSV** and **JSON** formats.

29. Retention Policies

Enterprise admins can set retention on team folders from 30 days to indefinite via **Admin Console > Policies > Retention**.

30. Litigation Hold

Enterprise compliance control that overrides normal user deletion actions, holding files indefinitely until disabled by an admin.

31. User Offboarding

Admins should reassign or export user data before account deletion. Uploaded team folder files remain intact after user removal.

32. Full Workspace Export

Owners can export team folders, audit logs, and settings via **Admin Console > Data > Export Workspace** (up to 24 hours processing time).

33. Enterprise API

REST API keys generated under **Settings > Developer > API Keys**. Default rate limit: **1,000 requests/hour/key**. Supports read-only and read-write scopes.

34. API Key Rotation

Immediately invalidates old keys. Dependent applications/scripts must be updated immediately upon rotation.

35. Data Residency

Supported regions: **US**, **EU**, or **APAC**. Region transfers require Support-managed data migration.

36. Compliance & Certifications

Synthetic product certifications: **SOC 2 Type II** and **ISO 27001**. Available under **Settings > Compliance > Documents**.

37. Data Processing Agreement (DPA)

Requestable via **Settings > Compliance > Documents**.

38. GDPR Data Subject Access Requests (DSAR)

Submitted via Compliance panel with a target fulfillment period of **30 days**.

39. Support Plans & SLAs

Tier	Channel	Target First Response
Free	Email	48 Hours
Pro	Priority Email	8 Hours
Enterprise	Dedicated Direct Channel	Severity 1: 1 hr Severity 2: 4 hrs

40. Incident Severity

- **Severity-1:** Full outage or credible data-loss risk.
 - **Severity-2:** Major feature broken with no workaround.
-

41. SLA Credits

Enterprise contracts offer SLA credits for missed response times, processed per contractual terms.

42. Diagnostics

Access via **Settings > Diagnostics** to inspect status, error codes, application logs, and clear cache.

43. General Backup Troubleshooting

```
[1. Check Internet] → [2. Verify Folder Path] → [3. Check App Permissions]
                                     |
[6. Check Diagnostics] ← [5. Verify Free Quota] ← [4. Check Local Disk Space]
                                     |
                                     |→ [7. Note Error Code] → [8. Restart App] → [9. Escalate Ticket]
```

1. **Verify Connectivity:** Ensure internet access is active.
 2. **Verify Folder Path:** Confirm local backup sources exist.
 3. **Verify Permissions:** Ensure Vaultify has folder read permissions.
 4. **Check Quota:** Verify cloud storage is within limits.
 5. **Check Local Disk:** Ensure ≥ 2GB free space.
 6. **Restart Application:** Restart Vaultify desktop app.
 7. **Review Diagnostics:** Note error codes in **Settings > Diagnostics**.
 8. **Consult Support:** Escalate with logs if required.
-

44. General Sync Troubleshooting

If Sync is stalled:

1. Confirm Sync is not paused.
 2. Confirm network connectivity.
 3. Confirm local storage is available.
 4. Pause Sync.
 5. Wait approximately 60 seconds.
 6. Resume Sync.
 7. Review bandwidth limits.
 8. For files over 10GB, verify Large File Sync is enabled.
 9. Restart the desktop application if necessary.
 10. Check Diagnostics for an error code.
-

45. Sharing Troubleshooting

- **Expired links:** Check configured expiration date and workspace default expiry.
 - **Password problems:** Confirm exact case and remove accidental copied spaces.
 - **Missing external sharing:** Check whether an Enterprise admin disabled external sharing.
 - **Insufficient permissions:** Review whether the user is Viewer, Commenter, Editor, or Folder Manager.
-

46. Integration Troubleshooting

If an integration appears Connected but is not operating:

- Reauthorize the integration.
- Confirm required permissions and verify target channel/account.
- Check organization-level OAuth restrictions.
- Confirm Vaultify version supports the integration.

Note: Google Workspace permission failures may require a Google Workspace admin to approve OAuth scopes. Microsoft Teams integration requires Vaultify v4.0 or later.

47. API Troubleshooting

- **HTTP 429:** Rate-limit exhaustion (Default: 1,000 req/hr/key). Implement exponential backoff or request higher limits.
 - **HTTP 403 ON WRITE:** Key is read-only instead of read-write.
 - **Failure after Key Rotation:** The old key was invalidated. Update integration credentials.
 - **Unknown API failures:** Capture request context and error code without exposing secrets.
-

48. Billing Troubleshooting

- **Downgrade failures:** Verify current storage usage is below destination plan quota.
 - **Add-on removal:** Reduce usage below post-removal capacity first.
 - **Invoice questions:** Review line items (storage add-ons are billed separately from base plans).
 - **SLA-credit questions:** Review Enterprise contract terms and next billing cycle.
-

49. Storage Capacity Behavior

Storage notifications trigger at **90%** (warning only) and **100%** usage.

Plan downgrades exceeding target quota trigger a **14-day grace period** before new uploads are paused.

50. Release History

- **v4.2:** Added Large File Sync beta (supports files up to 50GB).
 - **v4.1:** Added Enterprise Customer-Managed Encryption Keys (CMEK).
 - **v4.0:** Added Microsoft Teams integration, CSV/JSON audit log exports.
-

51. Difference Between Backup and Sync

Feature	Backup	Sync
Primary Goal	Protection and disaster recovery	Keep active working files consistent cross-device
Data Direction	One-way (Local device → Vaultify Cloud)	Two-way propagation across connected devices
Use Case	Accidental file deletion or hardware failure	Active multi-device or team collaboration
Mechanisms	Backup History & retention windows	Conflicted copies on offline edit collisions

52. Example Customer Workflow

Scenario: A 50-person company purchases Vaultify Enterprise.

1. Owner creates an Enterprise workspace in the EU region.
2. Employees are invited; SAML SSO and mandatory 2FA configured.
3. Engineering, Finance, and HR team folders are created with explicit permissions.
4. Desktop app installed; local folders configured for continuous Backup.
5. Team folders use Sync for live collaboration; alerts routed to Microsoft Teams.
6. Audit logs exported periodically; retention policies set on sensitive folders.
7. API keys created for automation; departing employees offboarded cleanly.

53. Frequently Asked Questions (FAQ)

Q: Is Vaultify like Google Drive?

A: Broadly yes, but places additional emphasis on automatic backup, recovery history, enterprise administration, retention, and security controls.

Q: Does pausing Sync pause Backup?

A: No. They operate independently.

Q: Can a Free customer restore a file deleted 60 days ago?

A: Normally no. Free Backup History is 30 days.

Q: Can Pro customers obtain more than 1TB?

A: Yes, by purchasing 500GB storage add-ons.

Q: Can Vaultify synchronize a 30GB file?

A: Yes in v4.2 when Large File Sync beta is enabled (up to 50GB).

Q: Does Vaultify support Linux?

A: Yes, Ubuntu 20.04+ and Fedora 36+ (.deb/.rpm).

Q: Can an Editor change Team Folder permissions?

A: No. Only Folder Managers have permission-management capabilities.

Q: Can Enterprise customers select where data is stored?

A: Yes, US, EU, or APAC at workspace creation.

Q: Can the data region be changed later?

A: Only through a full support-assisted migration.

Q: What happens after API key rotation?

A: The previous key becomes invalid immediately.

Q: What encryption is used?

A: TLS 1.2+ in transit and AES-256 at rest.

54. Support AI Knowledge-Use Rules

Treat this manual as the authoritative synthetic source for product behavior. Match exact diagnostic codes with historical records from `vaultify_logs.csv`, avoid fabricating unverified limits or resolutions, and state clearly when escalation is required.

55. Important Demo Disclaimer

Vaultify is a fictional SaaS product created for an AI/RAG portfolio project. Its specifications, prices, certifications, SLAs, and procedures are synthetic and should not be represented as belonging to a real commercial service.
